

JOHANNES GIESSER MESSERFABRIK GMBH

GIESSER, one of the internationally leading manufacturers of professional knives and accessories, is known for premium quality made in Germany. The company looks back on a long tradition: Since 1776, the family business has been located in Winnenden and is managed in its seventh generation by the owners, Hermann and Hans-Joachim Giesser.

Only high-quality materials are used for the manufacturing by approximately 115 employees at the production facility in Winnenden: Annually, approximately 3 million professional butcher, chef's and kitchen knives are manufactured. Approximately 70% of the production is exported. The high demand for professional tools manufactured by GIESSER requires growth, more employees and new production facilities, thus in 2016 a new factory for grinding and polishing of knives will be inaugurated.

Premium quality of materials and processing is what sets GIESSER products apart. As one of the leading manufacturers of knives and accessories for professional users in the food processing industry, GIESSER aims, through innovative new developments and permanent production optimisations, to more than just fulfil the wishes of their customers. GIESSER is in permanent contact with the occupational associations in order to also be able to constantly raise occupational safety.
