THE MITT is the world's first mesh safety glove. The mitten shape ensures significant reduction of punctures and cuts in food service and food retail.

The main advantage of this new glove is its universal application. No matter whether users have small hands or large ones, whether they are right- or left-handed – the mitten offers an optimum fit and a high level of wear comfort. A special spring clip guarantees safety at the wrist, as well. This smart closure also makes it easy to put on and take off the glove.

Used primarily in the food service industry and at service counters in food retail, the mesh safety glove is intended for any cutting task that poses an increased risk of injury – such as filleting fish or opening oysters.

This unique mitten is manufactured from stainless steel mesh and meets the high standards of the employer's liability insurance association in Germany. It can be cleaned in all conventional washing machines and dishwashers. If heavily soiled, we recommend manual pre-cleaning.

THE MITT significantly boosts safety at a relatively manageable purchase price. Any work accident that could have been prevented by using the glove will cost the employer a great deal more.

THE MITT is available at specialist shops. More information is also available from GIESSER.
